Education

University Of Toronto

Anticipated Completion: May 2025

Honours BSc in Statistics & Computer Science & Mathematics

Toronto, Ontario

- **Member**, UofT Boxing Club (Sept 2024 - Present)
- **President**, UofT Web Development Club (Sept 2023 - Sept 2024)
- **Project Lead**, UofT Web Development Club (Sept 2021 - Aug 2023)

Experience

Software Engineer Intern | getQatalyst | Toronto, ON

Sept 2024 - Present

- Collaborating with **Professor Jorjani** at the University of Toronto to develop a platform that offers insights into the performance of software engineering teams
- Built scalable **RESTful APIs** using **Node.js**, **Express**, and **Octokit** to generate skill proficiency scores for developers
- Implemented **Firebase Authentication** and **Firestore** to enable secure user login and data management

Software Engineer Intern | Intact Financial Corporation | Toronto, ON

Jan 2024 - Aug 2024

- Improved **IaC** and reduced **Jenkins CI/CD** build times by **40%**, failures by **50%**, and operational costs through agent containerization using **Docker** and **OpenShift** as well as parameterizing **Jenkinsfiles**
- Increased vulnerability detection by **30%** by configuring **NexusIQ** and **Synopsys Polaris** scans for Jenkins pipelines to catch dependency and OWASP vulnerabilities
- Implemented **Kubernetes Horizontal Pod Autoscaling** on **OpenShift**, reducing CPU utilization spikes by **40%**
- Improved Jenkins security by offloading credentials to **HashiCorp Vault**, setting up user management and folders
- Increased Jenkins build insights and performance by **30%** with a custom **Dynatrace** dashboard

Software Engineer Intern | Intact Financial Corporation | Toronto, ON

May 2023 - Dec 2023

- Increased monthly release efficiency using **PyGithub** and **Jenkins** by **80%**, converting **8 hours** of manual work to **1**
- Increased **CI/CD** pipeline speed by **15%** by automating stale branch deletion using **JavaScript**, **Axios**, and **GraphQL**; notified branch owners via **GitHub Issues** automation and logged records in **MongoDB**
- Improved environmental stability by **75%** through a gating mechanism to block **Jenkins** promotions from DEV to STG based on **Prisma Cloud** and **Synopsys** vulnerability counts scraped with **Selenium**
- Developed a **Python algorithm** to detect and alert on missing **SQL** scripts between production and release branches, catching **1-3** files daily and **fully eliminating environment instability** from missing scripts
- Developed a **Python** script with the **Kubernetes Client** package to automatically deploy and containerize **Hashicorp Vault** improving Jenkins Infrastructure

Software Engineer | Kontech Insights, Project: Human City, Sustainable Life App

Nov 2022 - June 2023

- Developed a filter for user profiles using **Velo API** and **JavaScript** on Wix providing clients with more efficient navigation
- Partnered with CTO to conduct **12 user interviews** regarding obtaining key insights for product development
- Implemented frontend user feed, user profile, and search & explore mobile screens in **React Native**
- Modelled a flowchart for a mobile application using **Moqups & Figma**, designing a hierarchy with application entities
- Resolved 94 compiler errors in an **AngularJS** and **Ionic** stack, addressing syntax, dependencies, and runtime issues

Technical Skills

Languages: HTML, CSS, Javascript, Typescript, Python, Java, Groovy, R, C, SQL, GraphQL

Frameworks: Next.js, Angular, React Native, Django, Spring, Node.js

Developer Tools: Jira, Jenkins, Synopsys, Dynatrace, Sonarqube, Hashicorp Vault, NexusIQ, RedHat OpenShift, Kubernetes, Docker, Postman, MongoDB, PostgreSQL, Redis, AWS, Google Firebase

Libraries: React, Axios, Requests, Bootstrap, MaterialUI

Projects

VLR.gg Scraping API | *Python, BeautifulSoup, Requests*

Jan 2023

- Developed a web scrapping API for the Valorant e-sports coverage site, VLR.gg
- API returns structure json objects including player, match, and team statistics that can be found on the site

Livestream Lytics | *React, Flask, Supabase, PostgreSQL*

Nov 2022

- Developed a web application using ReactJS and Flask to study livestream chat data given a Youtube or Twitch link
- Developed a backend algorithm to find "X" most duplicate messages sent in chat
